

The secret to healthy living and weight loss

One of the best kept secrets of the modern world — a product that will nourish and help you regain strength — is now available on the West Rand.

INS High Fibre Bio Wheatgrass is developed through organic aeroponic cultivation. It is made of 100 percent pure wheatgrass — inclusive of the leaves and roots.

It's wholly natural, no preservation, no artificial colouring and no flavourings added. It is a bacteria-free, 100 percent natural and complete anti-oxidant food that improves the digestive system, blood circulation and skin problems.

It also boosts the immune system and restores energy.

Wheatgrass is cultivated in a low temperature, soil-less, chemical and bacteria free environment using a special technology known as Indoor Organic Aeroponic Cultivation Method.

It is exceptionally easy to ab-

sorb, giving quick results.

To date, many people have benefited from the rich nutrients that are provided by INS Wheatgrass Tea due to the special cultivation method.

Wheatgrass can also aid in weight loss.

When there is an increased level of lipids in the body, a hormone is activated to metabolise these lipids. A low secretion of this hormone will encourage the storage of fats in the body, resulting in obesity. The enzymes in wheatgrass have the ability to increase this hormone production to actively metabolise lipids and break down the structure of fat within the body, thus contributing to weight reduction.

INS Wheatgrass Tea is available from Dis-Chem Struben's Valley, situated at the Retail Crossing shopping centre.

• Details: Call Dis-Chem on 011 991 3600.

Twenty lucky readers can experience the benefits of wheatgrass tea first hand.

The *Rodepoort Record* has 10 boxes of INS Wheatgrass Tea and 10 containers of INS Wheatgrass Tea enriched with honey to give

away.
